

ASTROLOGY

the Science of the Soul

THE science of Astrology is found in all the ancient cultures because it is rooted in the most fundamental and universal experience of order--the movement of the planets as viewed from the earth. This is a mirror, a reflection of what lies within. As the ancients have said, *as above, so below*.

BY understanding the position of the planets at your exact moment of birth, insight is gained as to how you may best release and fulfill the potential of your chart--of your life. Your astrological chart is unique, like you. In order to develop and interpret your chart, an astrologer has to weigh the combined meanings of the ten planets and their placements in the many areas of your life--love, career, health, wealth, travel, and spirituality.

Astrology, by its ability to both clarify the nature of your potential and to indicate how it can best be manifested, enhances clarity, creativity and freedom of choice.

Astrology isn't fatalistic, but rather a tool that can help you make changes that enhance and improve your life. By giving you a greater awareness of what lies within and what lies ahead, you become better prepared to direct and control your life. — Priscilla Potter
